

TEUFELBERGER

# PULL-EYE

**TEUFELBERGER Pull-Eye**, the reeving aid with a guaranteed WLL (Working Load Limit) for TEUFELBERGER steel wire ropes.

**T**oday, a large number of crane ropes are provided with a so called „reeving aid“ at their outer end in order to facilitate their installation on the winch drum of the crane or other mechanical handling device. In most cases, these arrangements are welded, swaged, or otherwise fitted to the rope. Typically, these arrangements such as Becket Loops, Becket Eyes, welded chain links, pulling sleeve and such like, will also include a thinner pulling rope. Also the old rope could be used to install the new rope onto the crane or the machinery.

It should be clearly understood that the use of these arrangements introduce a risk of damage or personal injury if not properly controlled and fitted to the wire rope in a competent manner. It should take into account the diameter and the MBL of the new rope.

### How can TEUFELBERGER Pull-Eye help:

TEUFELBERGER is one of the first rope manufacturers who guarantees a WLL (working load limit) for its weld-connected pull-eye, related to the rope's diameter and MBL.

Therefore it will be known exactly which maximum tensile load can be applied to pull the rope onto the crane. Each rope end that is fitted with the TEUFELBERGER Pull-Eye is provided with a safety tag in the form of a pictogram indicating the WLL (pic. 1). This is to ensure that the person who installs the rope will know for sure what the applicable maximum tensile load may be.

Pull-Eye made by TEUFELBERGER – the chain link weld-connected to the rope featuring a specified guaranteed working load limit (WLL).
